

USE CASE

Finding low-competition, high-intent keywords

You sell reusable silicone food storage bags. One **/recommend** call returns 50 ranked keywords — including competitor terms surfaced automatically. Here's the request and how to read what comes back.

```
POST /api/v1/recommend
{ "description": "Reusable silicone food storage bags for meal prep" }
```

Keyword	Volume	CPC	Competition	Score	Category	Trend
reusable food storage bags	2,900	\$0.29–\$1.69	HIGH	75	direct	rising
silicone freezer bags	1,300	\$0.27–\$1.46	HIGH	73	direct	stable
stasher reusable silicone bags ★	590	\$0.15–\$0.64	LOW	69	direct	rising
sustainable food storage bags ★	110	—	LOW	67	direct	rising
stasher silicone bags	3,600	\$0.15–\$0.64	HIGH	67	competitor_brand	rising
stasher bags sous vide ★	210	\$0.21–\$0.79	LOW	63	use_case	rising

How to read it

- **Sort by jackpotScore.** The highest scores are the most winnable opportunities, balancing demand against how hard the term is to rank for.
- **Hunt the ★ rows: LOW competition + commercial intent + rising trend.** "stasher reusable silicone bags" and "sustainable food storage bags" have real demand with little competition — the jackpots.
- **category = competitor_brand** flags terms where shoppers are searching a rival (Stasher) — ads and content here capture competitors' buyers.
- **category = use_case** ("sous vide") reveals adjacent demand you might not have targeted.
- **intent** tells you buyer readiness, so you can prioritize transactional/commercial terms over informational ones.

Takeaway: a single API call turned a one-line product description into 50 ranked keywords — complete with real volume/CPC data, competitor terms, and use-case discovery — in about a minute. No seed list required.
